KUALA LUMPUR: Integrated facilities management services provider GFM Services Bhd has secured additional release orders worth RM83.1 million for major turnaround works at the Pengerang Integrated Complex (PIC) in Johor.

The contracts comprise RM16.3 million awarded to its wholly-owned subsidiary Highbase Strategic Sdn Bhd by Petronas Chemicals Isononanol Sdn Bhd and RM66.8 million awarded to its 60 per cent-owned indirect subsidiary Shapadu CR Asia Sdn Bhd by Pengerang Refining Company Sdn Bhd.

The release orders were secured under the company's existing integrated turnaround main mechanical and maintenance mechanical static (TA4MS) contract, with works scheduled to begin in 2027.

Including the RM148.2 million in release orders secured in July, GFM has accumulated turnaround work packages at PIC worth RM231.3 million.

PIC, which began operations in 2019, is preparing for its first major turnaround involving extensive maintenance, inspection and replacement works across the integrated downstream complex to ensure the continued reliability, safety and efficiency of its operations.

The latest awards expand the scope of work announced in July and are expected to contribute to the GFM's earnings for the year ending Dec 31, 2027.

Group managing director Ruslan Nordin said the latest contracts reflect the strength of GFM's expertise and complementary capabilities within its energy division.

"We will work closely with the project owners and stakeholders to deliver the awarded works safely, efficiently and in line with the required technical and operational standards," he said in a statement.

GFM's energy division comprises Highbase Strategic, 51 per cent-owned HIMS Integrated Services Sdn Bhd, a joint venture with Singapore-based Mun Siong Engineering Ltd, and 60 per cent-owned indirect subsidiary Shapadu CR Asia.

Collectively, these entities enable the group to deliver specialised mechanical maintenance and turnaround services across major downstream oil and gas facilities.
